

**Preferred Drug List
1Q2008
January 1, 2008**

The Preferred Drug List is a guide within selected therapeutic drug classifications for plan physicians. Generics should always be considered first line prescribing. In some cases a generic may not be available and in those instances more than one brand name medication may be a covered benefit. This Preferred Drug List is not inclusive nor does it guarantee coverage, but represents a summary of covered agents. Some covered medications may be limited by age restrictions of the patient or to particular dosing regimens.
